What is the Brightspark Swing Volume Tool (BSVT)?

A new look at volume - a visual tool for understanding how volume builds as a trend develops.

Compare the BSVT and the Volume chart below

The combination of price Swing and cumulative Volume depicts the importance of the legs of the trend.

How much stock has been traded in this swing relative to previous swings?

More on the Brightspark Swing Volume Tool

There are various trends operating in any issue at any one time, depending on the time frames being analysed.

The Brightspark Swing Volume Tool (BSWV) combines both Trend swings and Cumulative volume to create an indicator that creates an easy to read visual chart that confirms the strength or weakness of the trend.

BSWV uses two Swings to collect Volume traded

Minor and Major Swings based on
significant move of an average price.

Minor swings use a 5% move

Major swings use 10%. move

The Volume traded is
cumulatively added for the swing

The BSWV Colours

If the Swing is an upswing the volume is cumulatively added as the swing goes up and it is Coloured Green

If the Swing is a Down swing the volume is cumulatively added as the swing goes down and it is coloured Red

Major Swings are coloured in lighter shades

Comparing Standard Volume to BSWV

The BSWV chart shows the cumulative volume traded in a particular swing.

In a simplistic way it shows the strength / weakness of a particular trend swing by the accumulation or distribution of stocks traded

The larger the volume traded the larger the build up in the swing

Major and Minor Price Swings

How Weak or Strong is each Swing?

Cumulative Volume of Shares traded per Swing

Major Swings
with Cumulative
Volume

Cumulative Volume of Shares traded per Swing

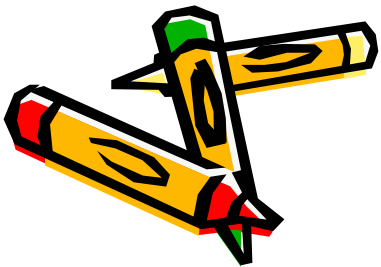

Major Swings with Cumulative Volume
Note the build up of volume as the price swing goes up
Compare this to the regular volume chart

Putting it all together

The major accumulation Upleg, gives cover to the minor Upswings with multiple signals of increased participation

Potential Uses/Signals

Accumulation/
Distribution
Minor Up
Minor Down
Major UP
Major Down

Minor Accumulation Upleg exceeds the previous down leg Distribution (A and B)

Potential Uses/Signals
